

October 2023 - Barbados

QGIS: Print Layout

Introduction

- We will look at creating a map output
- The map can then be printed or shared
- This includes looking at:
- Map elements
- Print Layout

Print Layout

- Print Layout is the tool to make exportable and printable maps in QGIS
- Able to add map elements (legends, scales, text, etc)

Print Layout

- Print layout saved to QGIS project file (.qgs)
- You can have many print layouts in a single project
- Print layouts can contain range of map items, including:
 - Maps
 - Attribute tables
 - Text
 - Images
 - Legends
 - Scale bars
- Layouts can be saved as templates
- Templates can be reused in different projects

Create a new Print Layout

Contents

- 🕛 🔹 Pan layout
 - Zoom on the print layout
- Select / move item
- Move content for the selected item on the print layout
- Edit nodes for example the nodes of an arrow
- Add New Map tool will add your current map
 - Adds a picture (eg. a logo) to the print composer
- Add title and other text info (data sources)

Print Layout tools

- Add legend (for the layers in the map) to print layout
 - Add scale bar (for the current map) to print layout
 - Add a shape rectangle, ellipse or triangle
 - Add an arrow
 - Add a polygon / polyline
 - Add HTML

Ę

Add an attribute table

Print Layout - Items

- Map
- Title
- Legend
- Scale bar
- North arrow
- Publication date
- Data sources
- Overview map

Print Layout – Items

- Items added to map will appear in the Items section
- Option to set the visibility
- Option to 'lock' your item
- Right-click for Item Properties

Item Properties

- Properties to be set depends on the item:
- Legend properties title, alignment, legend items
- Scale bar: style and units
- Map scale, rotation
- Shapes: style
